Emergency Communication System

Emergency Communication System

In cases where the existing communication infrastructure is missing or destroyed, the Disaster Communication Vehicle (DCV) system performs its main function.

Using the advanced technology in the DCV, users can freely communicate with each other on a fully IP-based network, allowing them to quickly and efficiently share important information in any situation.

Radio Communication
DMR, TETRA, APCO, LTE

Disaster Communication Vehicle

Command & Control Center

Satellite Communication
SATCOM ON THE MOVE

The second important function of the system is to enable users to connect to the Command and Control Center via Satellite Communications on the Move (SATCOM on the Move). This allows critical information to be transmitted in real time between ground crews and the control center to ensure efficient coordination of rescue operations.

Voice, data, images, video, messages and location info are shared between search and rescue personnel and the command and control center.
